Guidance notes: Select your tyre size on the chart and note the overall diameter [OD] - As a rule of thumb to avoid putting out speedometer calibrations when converting tyres do not increase the overall diameter by more than 1.5% or decrease by 2%. This calculation must be taken from the tyre size fitted originally by the vehicle manufacturer.

Basic rules when converting tyre sizes:

- Ensure there will be no bodywork or mechanical contact. Allow space for snow chains if required
- Don't reduce the vehicle manufacturers specified tyre's load and speed rating
- It is the responsibility of the person carrying out the work to ensure the vehicle remains safe

Different tyre manufacturers diameters may differ from the Maxxis dimensions shown above. If in any doubt consult a qualified technician /tyre manufacturer. The above information does not constitute a binding agreement. Dealer and end user are both bound in law to respect obligatory regulations & any technical instructions from the rim/tyre/vehicle manufacturers as well as legislative and regulatory authorities.
